

Subject: Sunburst Inc. Introduces an Advanced Open Flame Torch System for Weed Control

SUNBURST ANNOUNCES INNOVATIVE NON-HERBICIDE WEED CONTROL SYSTEM

SpHot Weeder™ Raises Efficiency, Provides High-Performance Thermal Weed Control

Eugene, Ore. - January 8, 2014 - Sunburst, Inc. announces a major innovation in hand-held weed control systems with the addition of their SpHot Weeder™. The open flame torch system is the latest addition to the company's line of patented thermal weed control tools and provides users with an economical, effective and less hazardous way to manage unwanted vegetation.

The SpHot Weeder's™ basket design revolutionizes existing hand-held weed control systems by channeling an open flame to produce unprecedented results and precision. The unique lightweight design is ideal for an array of routine weed control applications, including fence lines, gravel areas, pavements, trails and more.

"While developing large-scale commercial tools, we saw the need for equipment that serves both small or hard to treat areas. We are excited to introduce a tool that not only provides a safe and targeted way to remove weeds, but also eliminates the need for herbicides" said president Greg Prull.

The SpHot Weeder™ is built using only the highest quality components to ensure long lasting, high-quality performance with minimal maintenance. The device is available in single or double burner models, offering scaled precision for a variety of uses. Available accessories include a fuel supply wand, hose, regulator and backpack with a 2.6 gallon tank. The portable pack allows users to work without being tethered to a long supply hose, making the SpHot Weeder™ system mobile and convenient to use.

Pricing and Availability

The SpHot Weeder™ is available for purchase online at www.thermalweedcontrol.com and by phone. For more information please visit our website, or call Greg Prull at (541) 345-2272 (office) or (541) 554-2862 (cell).

About Sunburst Inc.

Sunburst Inc. is an established provider of advanced thermal vegetation management technology and equipment for both commercial and home applications. Leveraging over two decades of weed management development and research, the company is dedicated to providing reliable and effective non-chemical tools.
